

Fabricated Flanged Coalescing Filters

Models | NA684 to NA12823

Flow Rates 2800 SCFM (4757 Nm³/hr) to 16100 (27354 Nm³/hr)

As a filtration solution for larger flow applications of up to 16100 SCFM (27354 Nm³/hr), Walker Filtration's range of flanged filters offers 10 models ranging from 6" to 12" flanged connections.

Constructed from robust carbon steel with an anti-corrosion Walker E-Coat™ finish, all flanged housings are fitted with a dual sided differential pressure indicator for easy viewing. Permanent drainage is provided via a side mounted drain port.

Featuring our custom engineered oleophobic borosilicate filtration media and custom engineered re-entrainment layer, filter elements guarantee exceptional dirt holding capacity and drainage capabilities. The unique material construction also minimizes pressure drop by providing exceptional filtration performance with low operational costs.

Four grades of filter elements are available, from 5 micron to 0.01 micron including Activated Carbon.

- **Quality Design and Build** Designed and manufactured in accordance with ASME VIII, Div 1. and U stamped for the USA
- **Market Leading Performance** Custom engineered filtration media delivers exceptional filtration with minimal pressure drop
- **Corrosion Protection** Internal and external electrophoretic paint finish followed by a tough exterior polyester powder coating
- **Optimized Filtration** Oleophobic borosilicate filtration media with custom re-entrainment layer for exceptional dirt holding and drainage

Technical Notes

- Flanged filters are fabricated from carbon steel.
- Flanged filters are designed and manufactured in accordance with ASME VIII, Div 1. and U Stamped for the USA.
- Flanged connections are to ANSI 150 #RF.
- Filter element bottom end caps are color coded black and are internally threaded to ease installation.
- Activated Carbon Filters must not operate in oil saturated conditions.
- Activated Carbon Filters will not remove certain types of gases including carbon monoxide and carbon dioxide.
- Grade AC elements must be changed periodically to suit application but at least every six months.
- Differential pressure indicators are fitted to all models.
- Inlet and outlet pressure tapings are included to facilitate pressure gauge installation.
- ½" manual drain valves are fitted to NA684 (grade) to NA8810 (grade), 1" fitted to NA10812 (grade) and NA12823 (grade) as standard.
- An additional side entry drain port is included on all models.
- Flanged filters and filter elements are suitable for use with mineral and synthetic oils plus oil free compressed air applications.
